

#### Stationary Habitat --- Geometry

Dynamic Habitat --Hydrodynamics, ocean conditions, weather

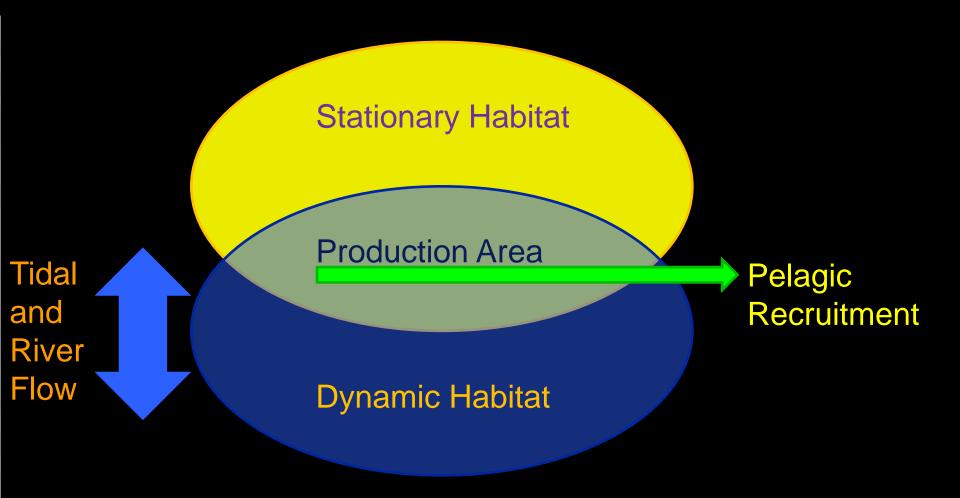

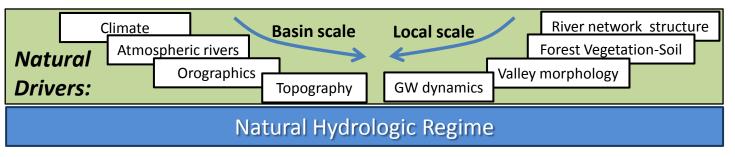

**Biological Conditions** 

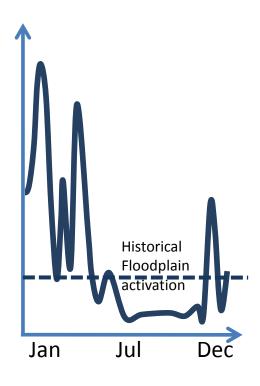

Environment

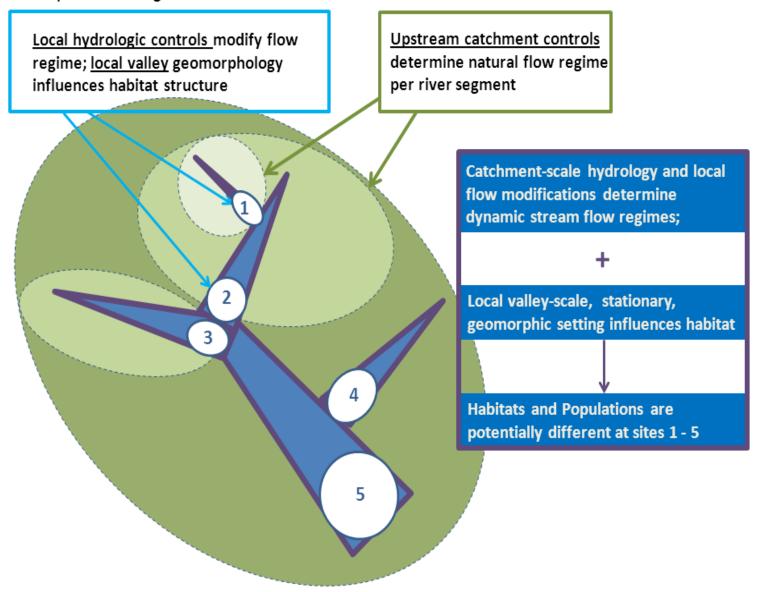

# Estuarine habitat conceptual model (Peterson 2003)

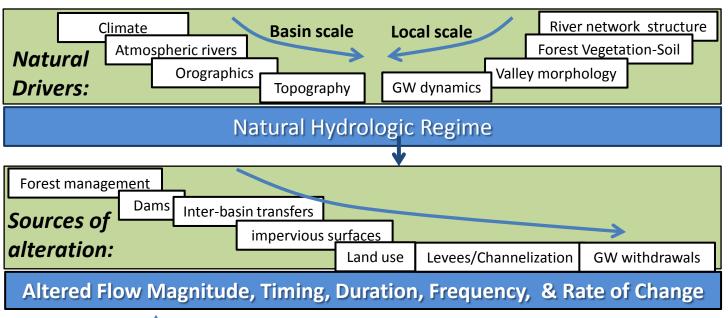

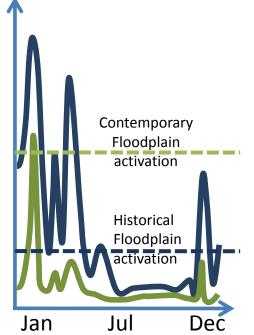

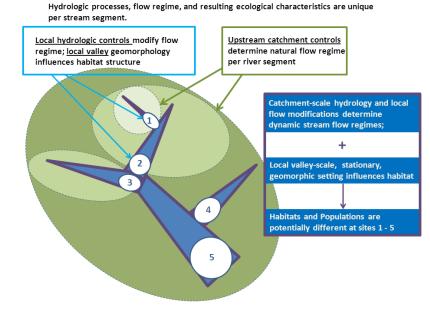

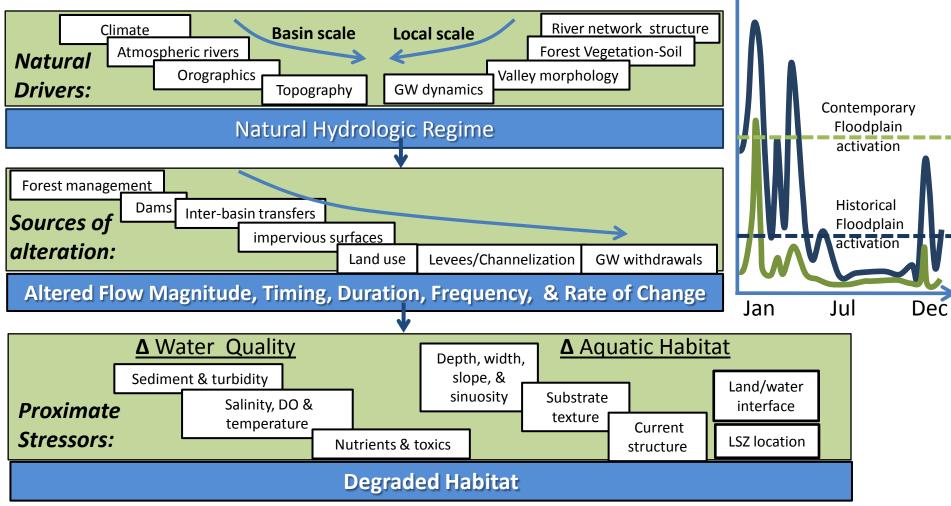

Hydrologic processes, flow regime, and resulting ecological characteristics are unique per stream segment.

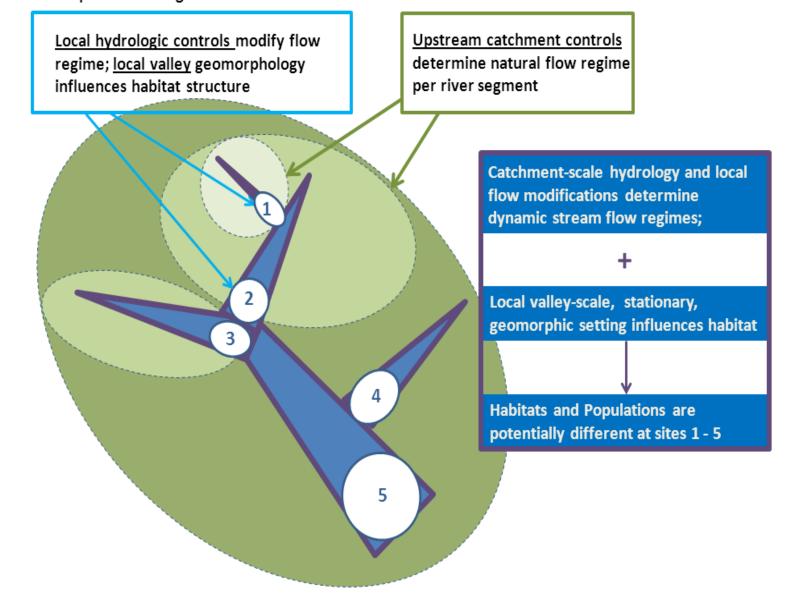

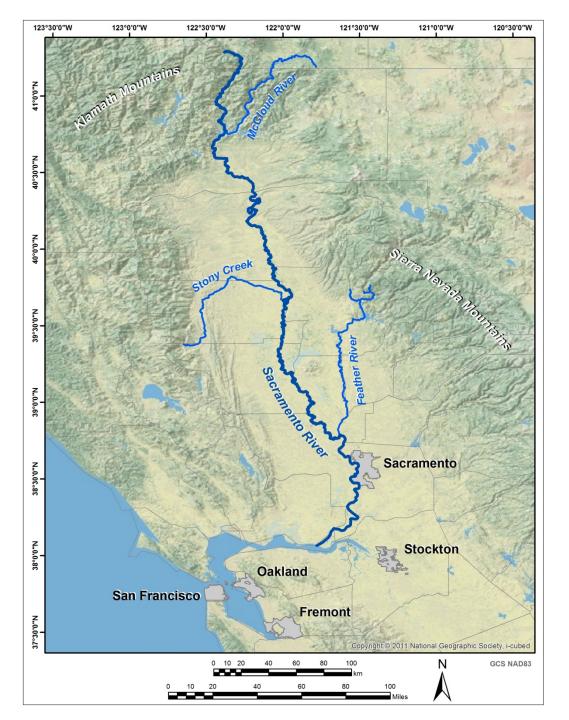

Cascade of responses to altered flow River network structure Climate **Basin scale** Local scale Forest Vegetation-Soil Atmospheric rivers Natural **Orographics** Valley morphology **GW** dynamics **Drivers:** Topography Contemporary **Natural Hydrologic Regime** Floodplain activation Forest management Historical Dams Inter-basin transfers Sources of Floodplain impervious surfaces activation alteration: **GW** withdrawals Levees/Channelization Land use Altered Flow Magnitude, Timing, Duration, Frequency, & Rate of Change Jul Dec Jan Δ Aquatic Habitat Δ Water Quality Depth, width, Sediment & turbidity slope, & Land/water sinuosity Substrate Salinity, DO & interface **Proximate** texture temperature Current Stressors: LSZ location **Nutrients & toxics** structure **Degraded Habitat Biological** Reproductive success Food Competition & Physiology & & timing availability predation behavior Response: Impaired Growth, Reproduction, and Survival of Native Populations

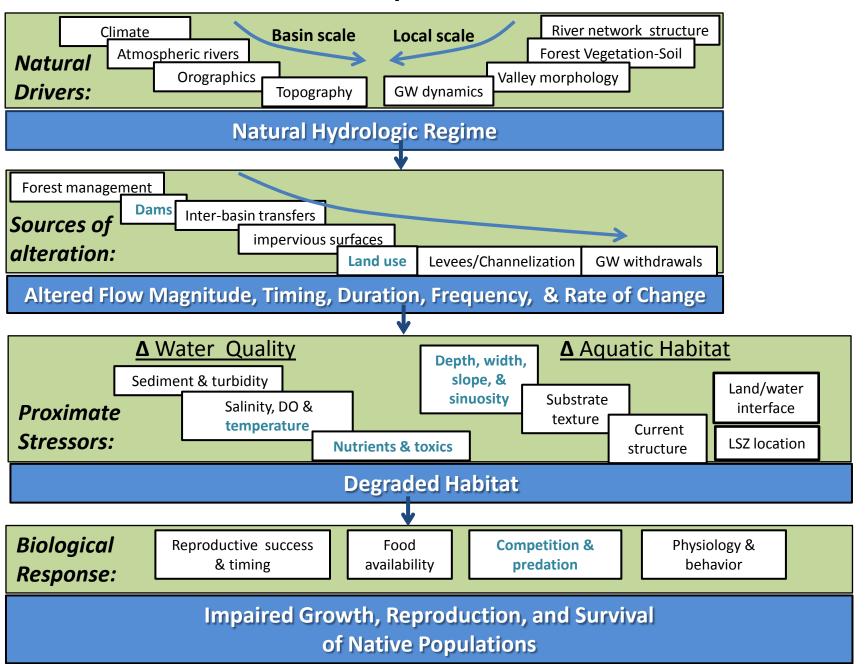

Hydrologic processes, flow regime, and resulting ecological characteristics are unique per stream segment.

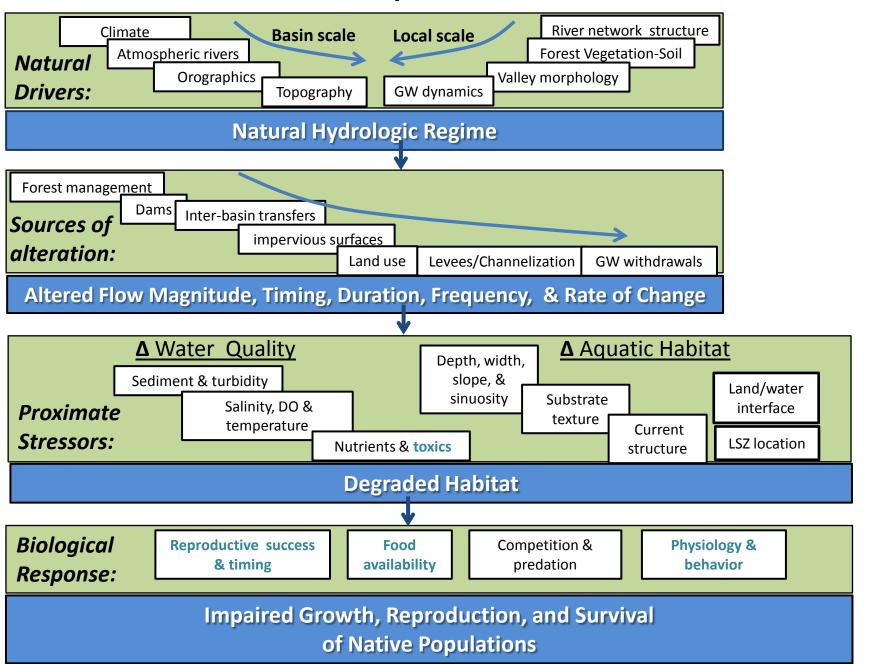

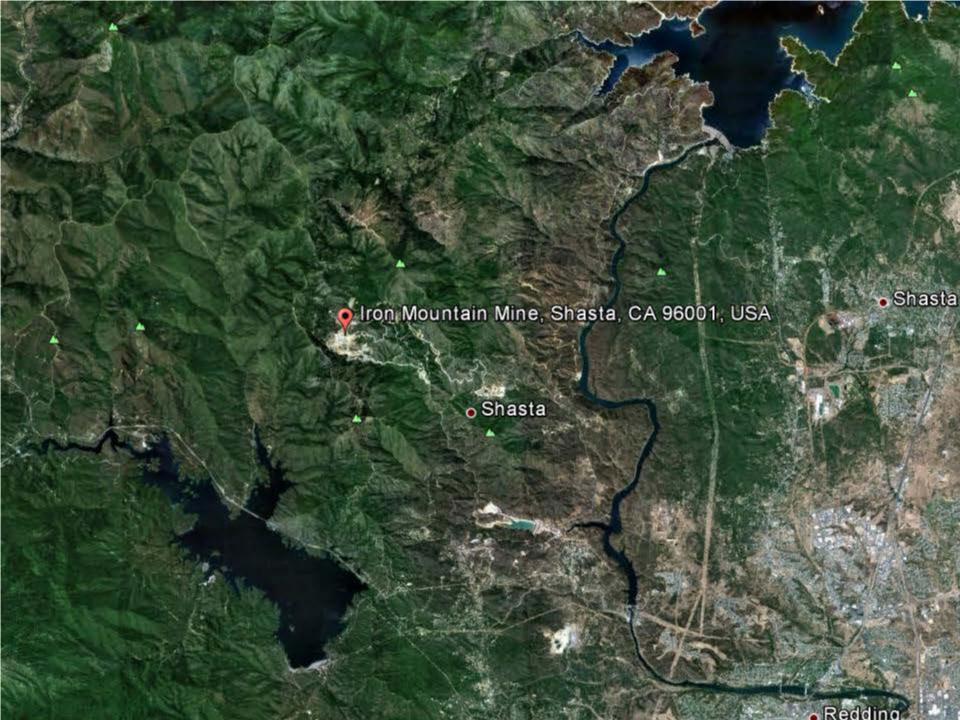

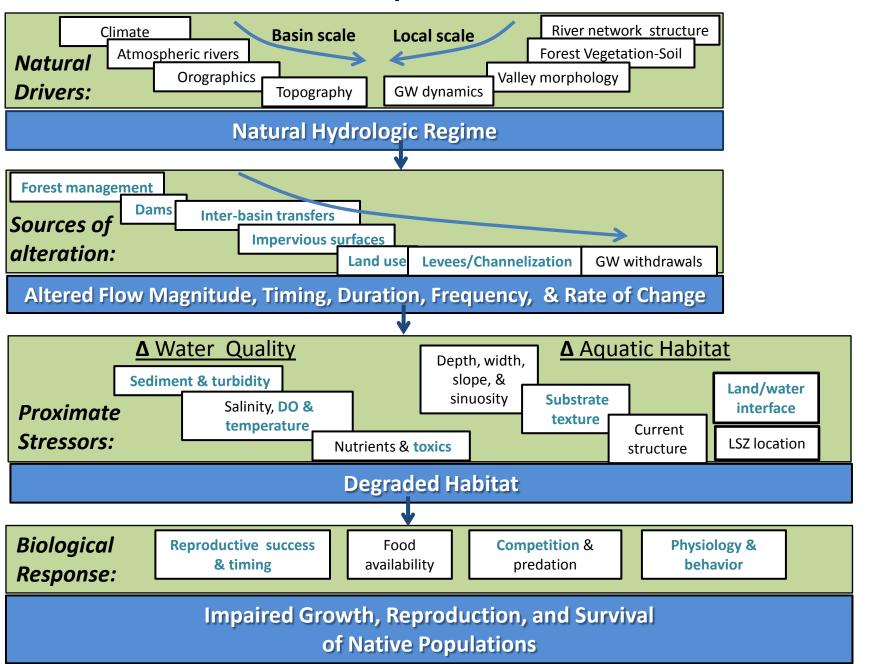

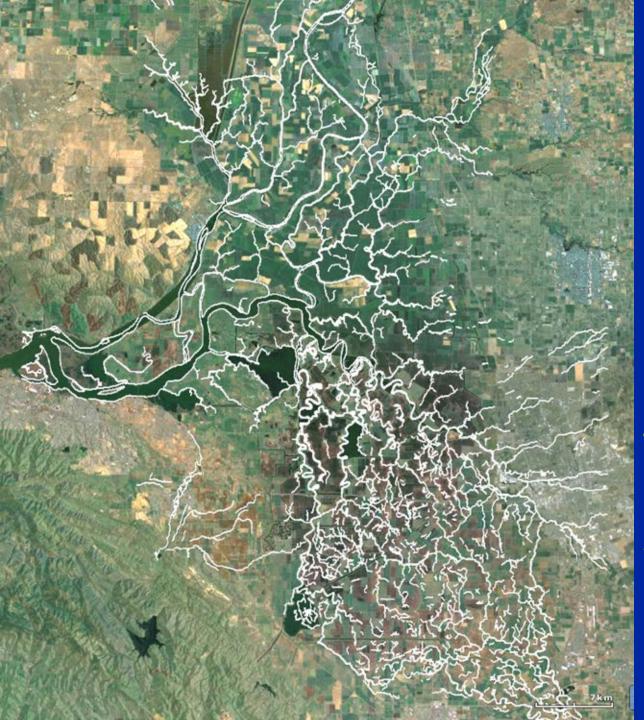

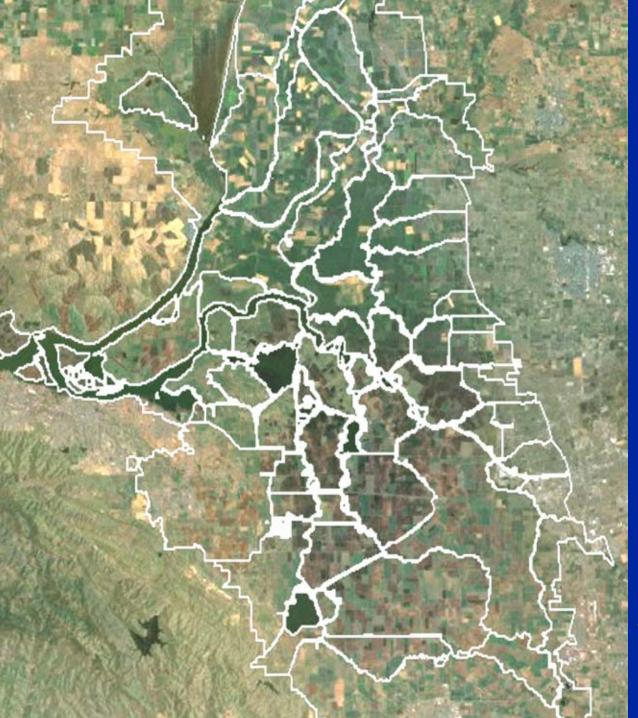

#### 1873 Delta:

Long residence time

Marsh connections

Two rivers connect to bay

Waterways dendritic

#### Modern delta

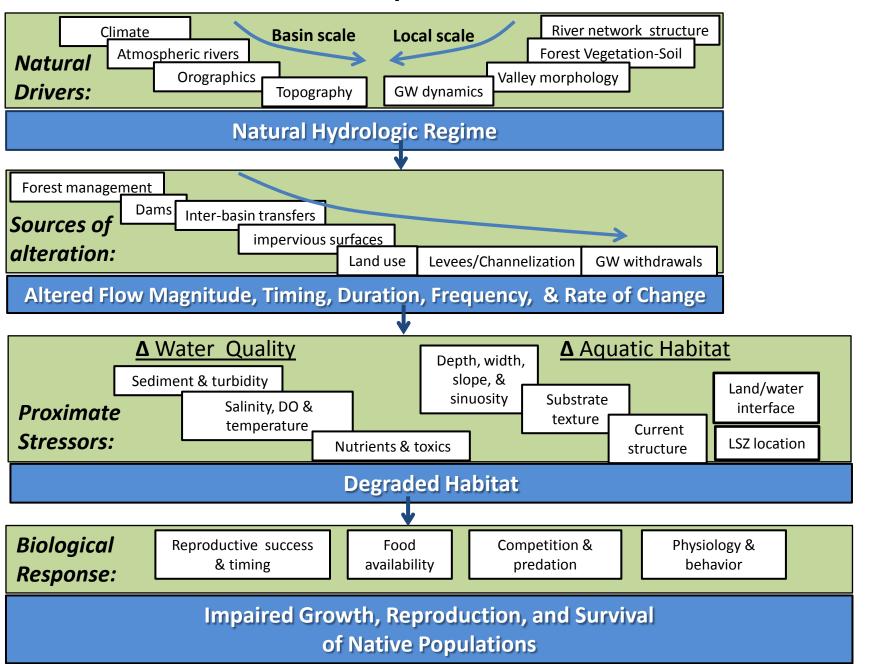

Short residence times

Rip-rapped

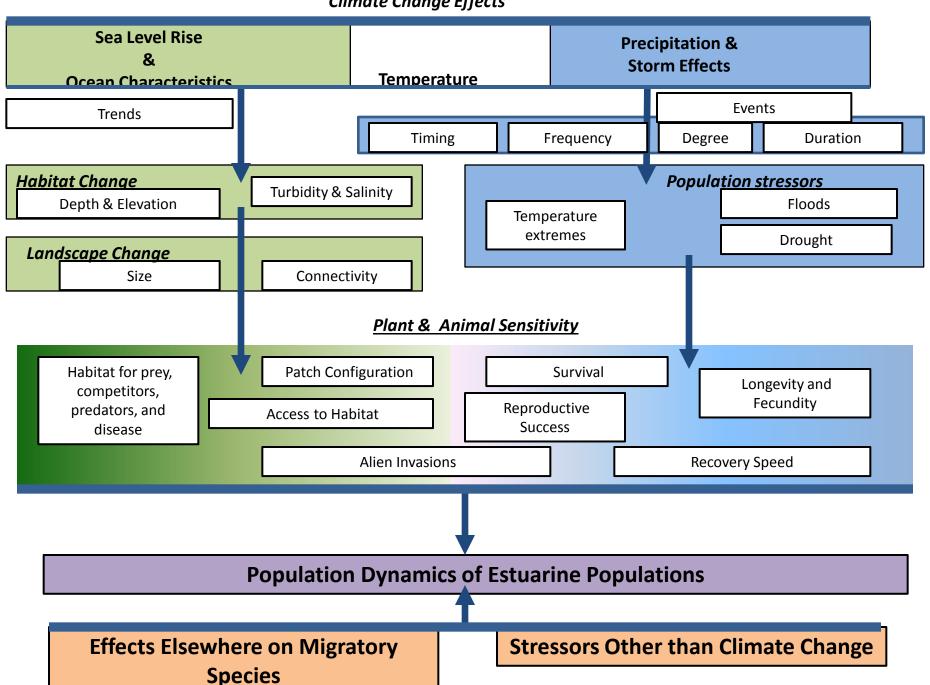

**Cross Delta flows** 

Rare San Joaquin connection to bay

Waterways web-like

#### Climate Change Effects

#### How much water do fish need?
